

Touch-First Browsing

We've found that this webpage is not enhanced for touch-based browsing.

For some sites, a good touch experience simply means making sure you take care of the basics, such as using appropriately sized buttons and avoiding mouse hover menus. You can also optimize this webpage for a richer touch experience by using gestures or specialized panning and zooming behaviors. Consider using Pointer Events to support touch, along with mouse and pen, for more advanced interaction.

Flip Ahead Browsing

The URL we scanned is not using the "prev" and "next" link relations. These attributes help search engines and browsers better understand the hierarchy of your website content and enable new features to improve the browser experience of your visitors like Flip ahead browsing

How to implement:

To enable pagination and Flip Ahead browsing, add the following to your page's element

```
<link rel="next" href="/next"/>
```

```
<link rel="prev" href="/prev"/>
```

Windows Tiles + Notifications

A Windows Start tile can make it easier for users to find and pin, increasing visits to your site.

This can be completed with two lines of code and a PNG image like this:

```
<meta name="msapplication-TileColor" content="#123456"/>
```

```
<meta name="msapplication-square150x150logo" content="square.png"/>
```

		CSS	
LINE #	Error Occurred	Browser affected	Fix required
10	Fallback colour required for RGBA	All	Inserted RGB and Opacity above error
15	Outlines should only be modified using :focus	All	Added focus element for outline
